

Mood and functioning

PARADISE24fin is an evidence-based instrument for assessing the scope and severity common psychosocial difficulties during the last 30 days. The PARADISE24fin can be used as an interview protocol or as a self-administered questionnaire. Feedback is provided. The PARADISE24fin is a tool for quickly discovering the profile of psychosocial difficulties. The profile can be used to guide the planning, follow-up and reporting of health-care interventions. More information about the questionnaire <https://tietopuu.a-klinikkasaatio.fi/paradise24fin>
